

Alfonso Graña

SRE / Cloud Engineer

Phone:	+31619216129
Address:	Eindhoven, Netherlands
Website:	https://about.me/agrana
Email:	alfonso.grana@gmail.com

Experienced technologist with a two-decade track record of advancing engineering and providing technical leadership within mission-critical systems across a wide range of industries.

Technical Skills:

- 10 years of hands-on experience in cloud technologies, including AWS and Azure.
- Proficiency in Serverless, CI/CD/CT, and GitOps for streamlined development.
- Expertise in Infrastructure as Code using Terraform and CloudFormation.
- Skilled in configuration management with Ansible and Chef.
- Proficient in Python and server-side JavaScript development.
- Strong troubleshooting and performance tuning abilities in Linux environments.

Soft Skills:

- Focused on delivering value to customers.
- Takes ownership of projects and tasks.
- Maintains a positive attitude towards challenges.
- Capable of identifying and developing team strengths.
- Committed to continuous learning and growth.
- Comfortable working in Agile methodologies (Scrum/Kanban).

EXPERIENCE

January 2024 -
Present

Brenntag

Developer Experience Engineer

As a developer experience engineer, provided tools and processes to ensure optimal developer productivity and satisfaction.

Maintained and improved.

- Gitlab CI/CD
- Atlassian suit
- Jfrog artifactory
- Snyk

January 2023 -
December 2023

Shell Recharge Solutions

Senior Site Reliability Engineer

I served as a Site Reliability Engineer at Shell Recharge, where I was a part of a dedicated team of SREs responsible for managing a network of both public and private electric vehicle chargers.

Our infrastructure was hosted on AWS, specifically leveraging Kubernetes through Amazon Elastic Kubernetes Service (EKS).

One of my key responsibilities was collaborating with development teams to define Service Level Indicators (SLIs), Service Level Objectives (SLOs), and error budgets, ensuring the reliability and performance of our systems.

I also acted as the primary point of escalation for any cloud-related issues that arose during our operations.

The primary AWS services that played a critical role in our infrastructure included:

- Amazon EKS (Elastic Kubernetes Service)
- Amazon RDS Aurora PostgreSQL
- Serverless architecture utilizing AWS Lambda and AppSync

Additionally, I introduced MongoDB Atlas as a document store solution to enhance our application's data management capabilities.

October 2021 -
January 2023

WCC

Senior Site Reliability Engineer

As the first Sr. SRE engineer in WCC, I established processes and tools to help developers produce software that is reliable and secure.

Bridge between development teams and Operations Engineers, Technical consultants.

Ensured the observability of software products using APM and tracing technologies.

Accelerated the delivery of products to production through CI/CD and the integration of cloud technologies in the development lifecycle.

Developed platform building blocks used by development teams and operations.

Reduced the cost per release test, introducing IaC and automated deployments.

Participated in the architectural board where technology choices and patterns are discussed and adopted to use company-wide.

July 2019 -
September 2021

ASML via Itility

Devops Engineer / Consultant

Working exclusively for ASML's data platform that host the applications to interact with the machines in customer chip fabrics.

This platform is key to optimize the yield of silicon wafers by chip manufacturers.

Projects contributed as an engineer:

- Develop CI/CD pipelines for the data processing platform. Build, deploy the product to on-premise.
- Infrastructure development using Ansible to deploy and configure container orchestration solutions on top of DC/OS.
- Lead engineer/architect in the adoption of Azure and Azure DevOps platform for CI/CD/CT.
- Worked closely with ASML's CCoE to establish the framework for successful cost optimized secure cloud adoption.

November 2016
to June 2019

Liveclicker

Senior Cloud Engineer

As a cloud engineer in Liveclicker part of the core product team. I was responsible for enabling cloud technologies to development.

Design and implement solutions that work with always changing use cases and dynamic capacity demands.

Liveclicker is an early adopter of AWS, hosted fully in AWS since 2012.

We used a wide variety of services including: EC2, Lambda functions, RDS Aurora MySQL, Dynamo DB, S3, Kinesis, CloudFront, Elastic Transcoder.

Periodical reviewed our apps against well architected framework with AWS collaboration.

The projects that I worked on:

- Moving the compute infrastructure from EC2 classic to VPC.
- Lead the migration of databases hosted in EC2 instances to AWS Aurora.
- Re-Architected and migrated to serverless, a component to do web scrapes heavily used in the platform. New solution based in S3, API GW, Lambda, running node and puppeteer for browser automation.
- Introduced Ansible to run deployments instead of Capistrano.
- Build a chat ops solution to delegate deployments to QA teams.
- Architected a Kinesis data pipeline to manage the ingestion of analytics data.

July 2013 to
November 2016

inConcert

Head of IT Infrastructure

Heading up the IT infrastructure efforts in terms of reliability, security, and scalability of the company's SaaS platform.

Lead the build of data centers in the US and Spain.

Last level of escalation in infrastructure related issues for the global technical team.

Contributions:

- Enabled the migration of several customers to the SaaS model in Mexico and Spain.
- Introduced virtualization and standardized virtual environments.
- Automated deployments, patch building and distribution.
- Contributed to the improvement of the performance of the product. Using load testing with artificial clients developed in house and deployed in the cloud.

July 2012 to July
2013

HG via NetLabs

Senior Linux Sysadmin

Part of the site reliability engineering team.

Involved in various governmental projects as *nix system administrator and technical leader

My key responsibilities were:

Suggest changes to infrastructure and applications, to improve reliability, performance and security, fix problems and incidents.

Review change requests initiated by other areas for technical validation.

Interact with various teams DBAS, Virtualization, Networking, Linux/Windows System Administrators.

Ensure the adherence to processes in all the life cycle of the tasks, incident, problem, capacity, configuration management. Automatization of daily system administration tasks backups, application deployment, server provisioning.

My main projects were:

- Build a platform for centralizing email for many governmental institutions using Zimbra.
- Maintain the infrastructure of the Uruguayan governmental web portals, including portal.gub.uy and presidencia.gub.uy
- Datacenter migration from virtualized environment to a private cloud infrastructure IaaS.
- Owner of the configuration management process.

Tools I've used:

- Web Servers: Apache (load balancers and reverse proxies), Nginx as IMAP proxy.
- Mail Servers: Postfix, Zimbra

- Firewalls: Iptables.
- Application Servers: Tomcat, Jboss, WebSphere, GlassFish.
- Virtualization: User level Vmware
- ESXi, Vcloud director.
- Extensive use of scripting; bash, python, perl in that order.
- Automation tools: Puppet, Capistrano.

August 2011 to
July 2012

Abitab S.A.

Infrastructure Technician

Working within a team of system administrators, ensuring availability predictability and security of the core IT infrastructure. Always working in projects to add new services and improve existing infrastructure.

- Linux RHEL, AIX, server administration and monitoring. Network Services:
- bind, apache, postfix, squid, ntp, radius among others.
- Virtualization Vmware ESX, IBM Servers and storage boxes in high availability setup across multiple datacenters. - Cisco Layer 3 Switches, HSRP, Spanning Tree, IOS ACLs.
- Data center tasks, server provisioning, environmental monitoring, UPS, Power Generators.
- Administration of the ATM Network, ATM provisioning and configuration, troubleshooting.

April 2009 to
September 2011

Telecom Networks

IT Manager

Leader the IT team dev and ops.

- Build the team hire resources.
- Planning and designing IT infrastructure.
- Translate business needs into technical requirements.

Main achievements were:

- Adapt open source tools to business needs.
- Build a CMS using Drupal to manage the interaction with customers including reports and call center recording retrieval system.
- Build a reporting systems using BIRT (Eclipse business intelligence reporting tool)
- Build a web crawler for a big website reviews project.

September 2008
to July 2011

Telecom Networks

System Administrator

Ensuring availability and security of the IT infrastructure fixing several performance issues and redesigning of datacenter.

- Asterisk with FXO and PRI Interfaces
- SIP Trunking with carriers, partners and customers.
- Integrating asterisk with NEC pbx and Cisco routers with FXO FXS and E1 PRI interfaces
- Squid Proxy
- Active Directory
- Windows File Servers
- Share Point Services
- Extensive use of Mysql, performance improvements, security, replication backups etc.
- Bash, Php, Perl scripting.

Aug 2004 to Sep
2008

SouthLat Technology S. A.

Systems/Network Administrator

2004 to 2008

Finning South America

2007 to 2008

Network Administrator

EDUCATION

2001 to 2004

ORT Uruguay
Tecnico en Electronica Infomatica.

May 2018, June 2018.

Hack Academy
Backend Developer (nodejs)
Hands on course based in building an API using NodeJS, Express and MongoDB.

2004

ORT Uruguay
Linux Operating Systems.
Entry level Linux course.

2005

ORT Uruguay
Linux Administration.
Advanced Linux server administration.

LANGUAGES

English (Full professional proficiency), Spanish (Native or bilingual proficiency)

CERTIFICATIONS

April 2022 - April 2025

AWS Certified DevOps Engineer - Professional
AWS
Earners of this certification have an extensive understanding of implementing continuous delivery systems and methodologies on the AWS Cloud. They demonstrated the ability to automate resilient applications and infrastructure deployments using AWS services. Badge owners are able to enforce policies, implement automated monitoring, and configure event management of an environment.

Feb 2021 - 2023

Azure Developer Associate
Microsoft
Earning Azure Developer Associate certification validates the skills and knowledge to design, build, test, and maintain cloud applications and services on Microsoft Azure. Candidates participate in all phases of cloud development from requirements definition and design, to development, deployment, and maintenance.

October - January - 2022

Machine Learning Engineering for Production (MLOps) Specialization
Coursera
Course Certificates Completed

- Introduction to Machine Learning in Production
- Machine Learning Data Lifecycle in Production

- Machine Learning Modeling Pipelines in Production
- Deploying Machine Learning Models in Production

2006 - 2009

CCNA

Cisco Career Certifications

The Data Scientist's Toolbox

Coursera Verified Certificates

Learning How to Learn: Powerful mental tools to help you master tough subjects

Coursera Verified Certificates

INTERESTS

Guitar playing music production

Guitar and Bass playing.

Cooking

Nature and travel

Spending time on nature beaches, woods etc.

Take photos along the way
